

AUTOMATIC PRESSURE CONTROL

Forward's Automatic Pressure Control monitors high-pressure nitrogen systems. If there is any deviation from the selected pressure, the control will electronically signal the press to stop. A warning light on the control indicates the problem to the press operator. The Automatic Pressure Control ensures part quality in operations where accurate pressure is critical. It protects dies and presses from damage resulting from loss of pressure. Pressure range is 200-3000 psi.

Part Number: 7000-0032
